OrdinaryDiffEq (SciML)

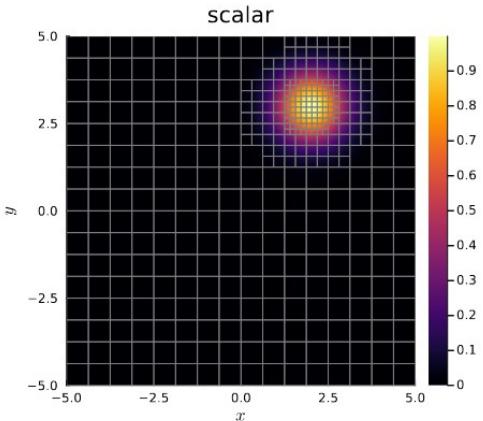

# Trixi.jl

Discontinuous Galerkin

(Stack Overflow)

AMR

```
using Trixi

equations = LinearScalarAdvectionEquation2D((0.5, -0.3))
solver = DGSEM(polydeg = 3)
cells_per_dimension = (16, 16)

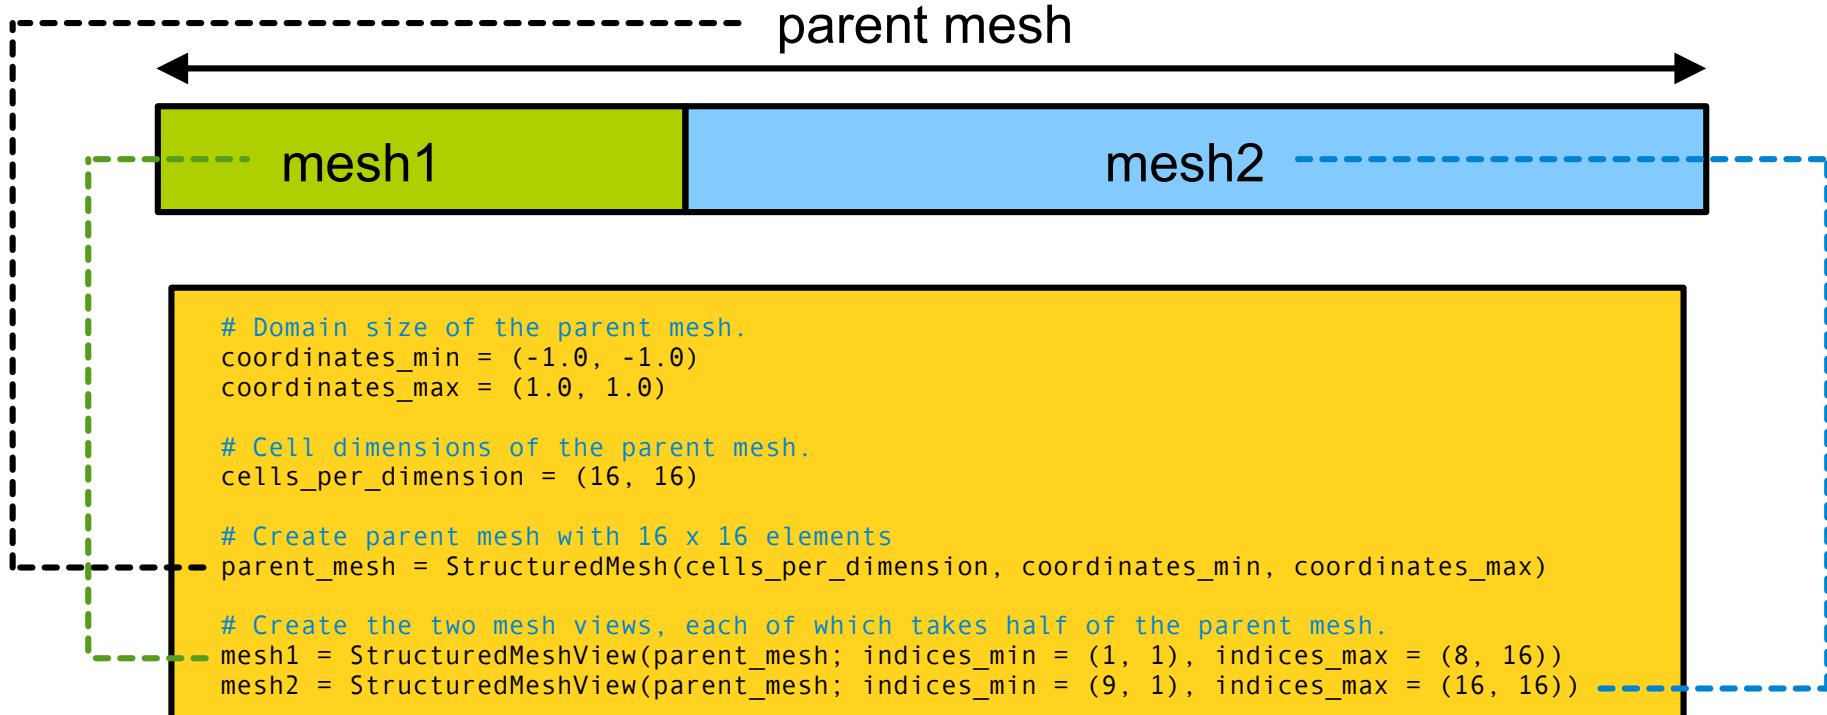

mesh = StructuredMesh(cells_per_dimension, (-1, -1), (1, 1))

semi = SemidiscretizationHyperbolic(mesh, equations,
                                      initial_condition, solver)
ode = semidiscretize(semi, (0.0, 1.0));

stepsize_callback = StepsizeCallback(cfl = 1.6)
callbacks = CallbackSet(stepsize_callback)

sol = solve(ode, CarpenterKennedy2N54(),
            dt = 1.0, callback = callbacks);
```

# Mesh Views

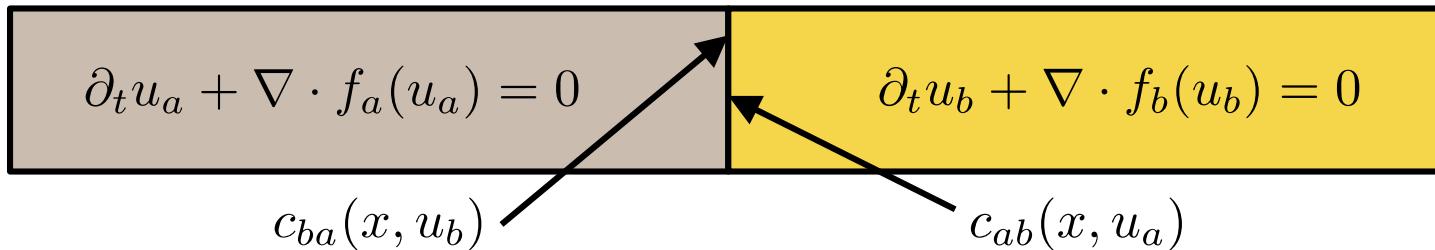

Mesh views appear like proper meshes for Trixi.jl.

Flexible and potentially adaptive usage of sub-domains.

# Coupling via Converter Functions

Two system with any number of shared variables, including 0:

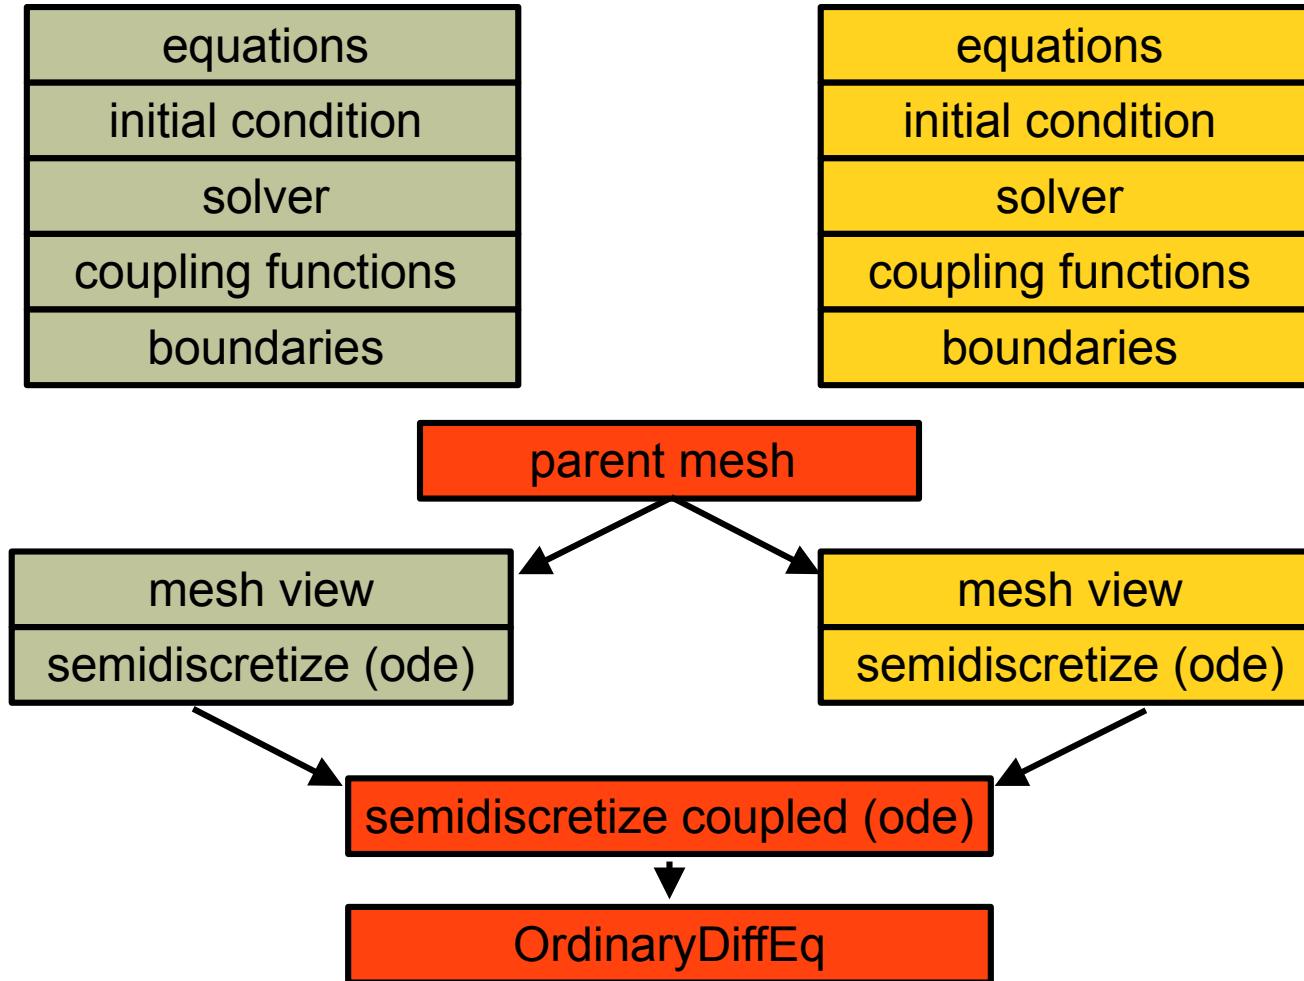

2.5d MHD $\rho, v_1, v_2, v_3, p, B_1, B_2, B_3, \Psi$	$\rho, v_1, v_2, p$	2d Euler
--	---------------------	----------

```
coupling_function12 = (x, u, equations_other, equations_own)
                      -> SVector(u[1], u[2], u[3], 0.0, u[4], 0.0, 0.0, 0.0, 0.0)
coupling_function21 = (x, u, equations_other, equations_own) -> SVector(u[1], u[2], u[3], u[5])
```

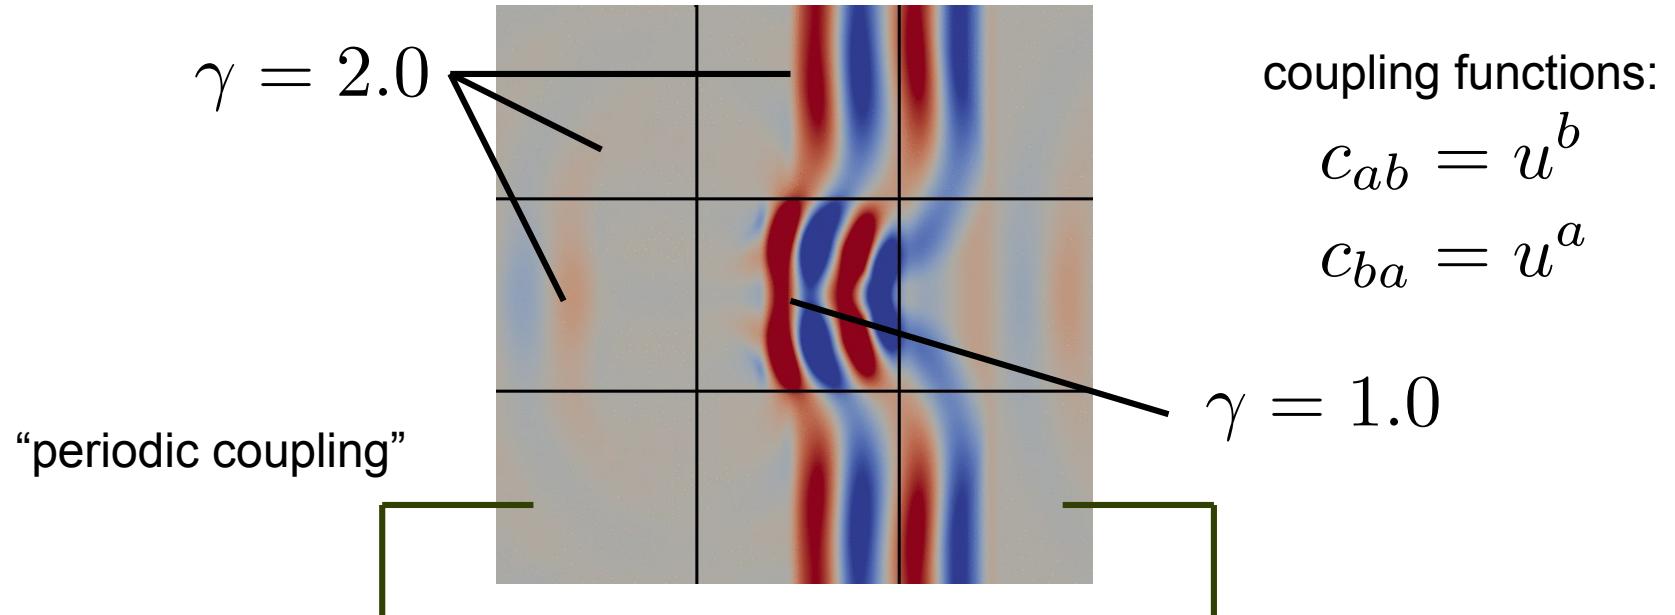

- ➔ User can define converter functions.
- ➔ Any pair of systems can be coupled.

# Work Flow Coupling

# Isothermal-Polytropic

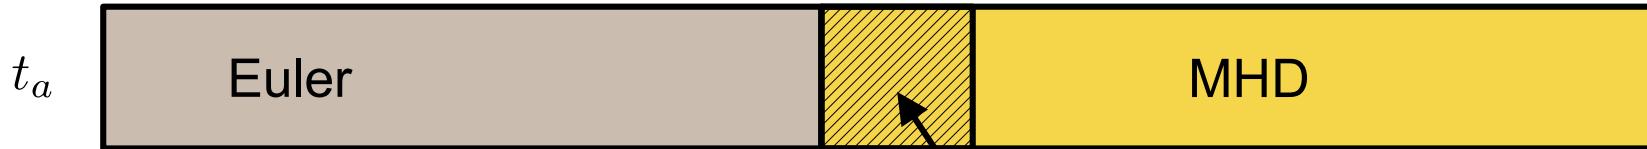

$$\partial_t \begin{pmatrix} \rho \\ \rho v_1 \\ \rho v_2 \end{pmatrix} + \partial_x \begin{pmatrix} \rho v_1 \\ \rho v_1^2 + \rho^\gamma \\ \rho v_1 v_2 \end{pmatrix} + \partial_y \begin{pmatrix} \rho v_2 \\ \rho v_1 v_2 \\ \rho v_2^2 + \rho^\gamma \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix}$$

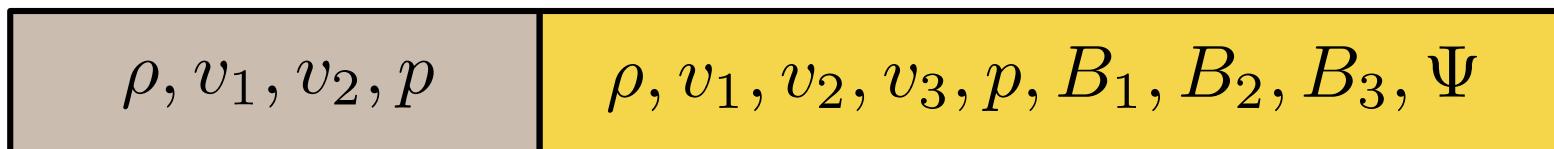

# Isothermal-Polytropic

# Adaptive Coupling

strong currents and magnetic fields

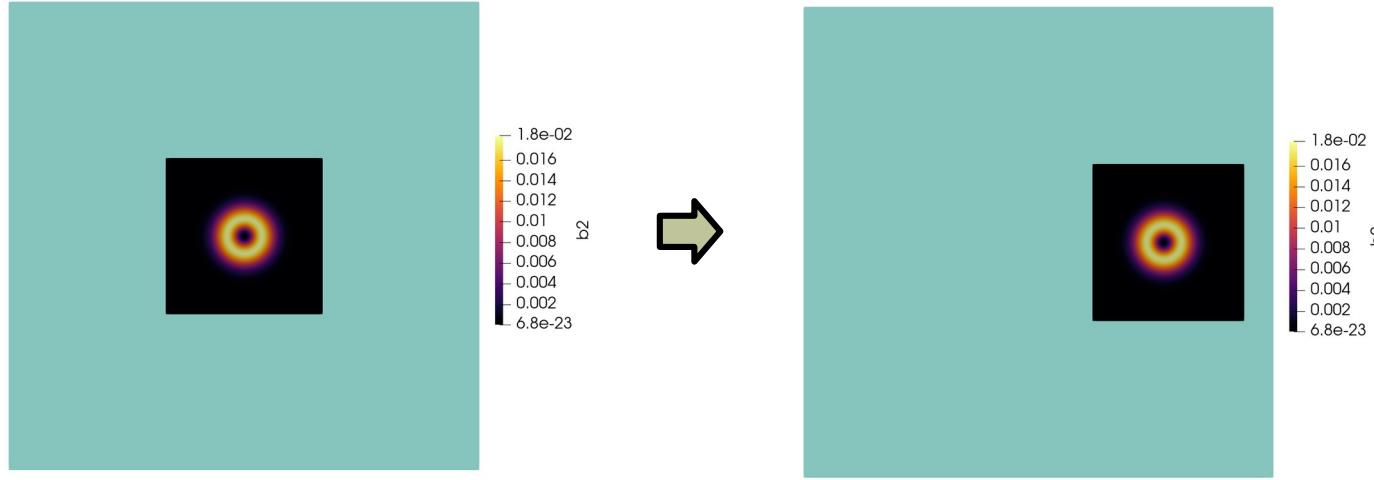

- ➡ Use callback functions to remesh.
- ➡ Use coupling functions to copy data.

# Adaptive Coupling

1. Generate the new grid (mesh views).
2. Write new u-solution vectors
3. Generate new ODE for OrdinaryDiffEq (integrator).
4. Reinitialize ODE integrator with new problem and new solution vector.

# Euler and MHD

(movies)

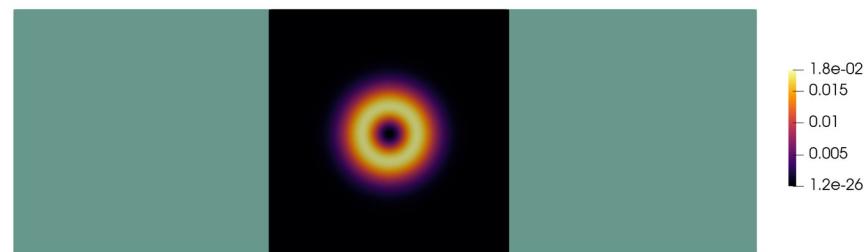

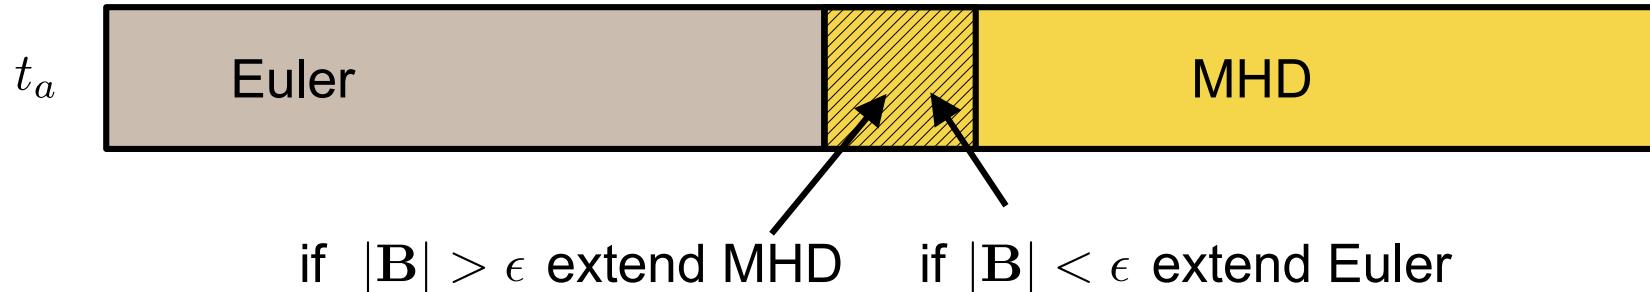

Time spent on coupled boundaries: 0.7%.

Timings: coupled  $\rightarrow$  671.8s  
full MHD  $\rightarrow$  1966.8s

Estimated maximum speed up: 3.31x; here: 2.93x

Time spent on remeshing: 2.048s pre remesh

# Remeshing Criteria

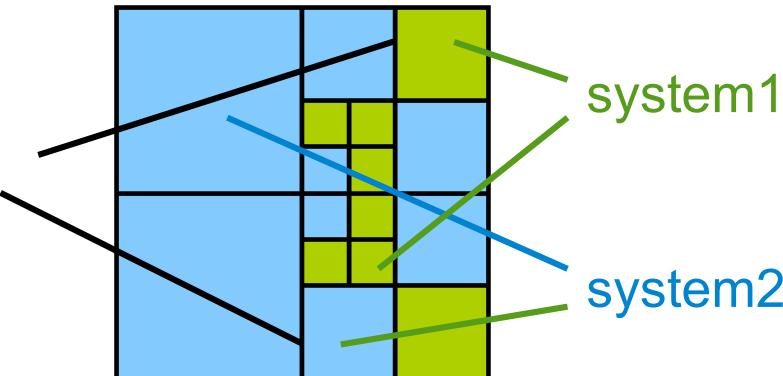

(movie)

Remeshing criteria needs to harmonized with the remeshing process.

# p4est Meshes

We can define the b.c. for each cell boundary.

parent mesh

mesh views:

# Conclusion

- ➡ Flexible coupling through converter functions.
- ➡ Free domain definitions.
- ➡ Adaptive coupling with arbitrary criteria.
- ➡ Coupled hierarchy of models.
